

NEW COOL OUTWELL SOLUTIONS TO HOT SUMMERS

Staying warm on site is usually seen as the priority but, with increasingly hotter summers, camping mid-season and in southern Europe can pose problems for staying cool despite fully opening the tent or awning to catch any breeze. Well, Outwell, has the answer. The Scandinavian family camping specialist's heater range that's designed to stay warm when camping in cooler climates and into the shoulder months has been joined by an all-new selection of fans and an air conditioning unit to cope with those hotter summer temperatures.

These reliable, safe, high performance products use 230V from a campsite's electric hook-up to deliver the perfect solutions to overheating and are ideal for use in tents and awnings, caravans and motorhomes. They comprise:

The Caleta Camping Aircondition (pictured right) uses a tank of water to quietly cool internal air to 5°C below the ambient temperature for 7 1/2 hours, or it can be used as a fan without water. Air has auto horizontal and mechanical vertical swing distribution with three fan modes and three power settings.

The Caleta is easily controlled using either the digital push display or the supplied remote control, with a timer adding versatility. It is supplied with a 3m cable and can be used with or without wheels.

Two fans safely and quietly operate in the background to assist air flow and help cool campers as the temperatures rise. Both have simple on-of controls. The 8W Christianos Camping Fan (pictured left) features an integral handle and 5m cable, allowing it to be hung from the roof of a tent or awning. Its small pack is enhanced by removable blades – no tools required.

The San Juan (pictured right) is an eight-inch table-top fan that features 3m cable and a smart safety motor with rubber blades.
