**Temperature and season ratings** – All our adult sleeping bags are tested to European Standards that dictate requirements for sleeping bags. They specify the use of a computer-controlled thermal manikin similar in shape and size to the human body. A sleeping bag containing a manikin is placed inside a temperature-controlled climate chamber and tested in accordance with a prescribed procedure to determine the thermal insulation properties of the bag.

Recommended temperature limits are based on the insulation properties measured and on knowledge of how the human body reacts to thermal conditions during sleep. (All double bags are tested with one manikin only and therefore the temperatures are most likely to be different from the one stated if two people are using the bags).

On each of our sleeping bags we quote the recommended temperature ratings for the following:

**Tcomfort** – lower comfort limit in standard use (woman)

**Tlimit** – lower limit when curled up in standard use (man)

**Textreme** – lowest extreme temperature for survival (woman)

Cosmos – Tcomfort 12°C, Tlimit 8°C, Textreme -5°C
