

## NEW ROBENS OUTBACK TENTS PROVIDE EVEN MORE OPTIONS FOR OUTBACK LIVING

Award-winning technical tent brand, Robens, has added four new tents and a windbreak to its superlative Outback range to offer yet more choice of eye-catching models that capture the essence of the back-to-basics bushcraft approach to life outdoors.

Inspired by the simple wood refuges used to explore the Scandinavian countryside, the Yukon Shelter (pictured left) offers a base that can be taken wherever the adventure leads. The spacious shelter sleeps four and has a sewn-in groundsheet, plus mesh inner door and vents for bug-free living. The useful

porch is protected by a versatile front wall panel that provides huge access, wide views out and the ability to balance ventilation, privacy and weather protection.

The immensely popular Klondike bell tent family is joined by the quick-pitching Klondike S (pictured right) that provides excellent levels of comfort for up to four people looking for space and headroom from a technical polycotton tent while minimising storage and transportation size and weight – especially beneficial when touring.

The vertical door makes for easy access – especially in bad weather – and protective eaves run around the tent to shelter door and walls from rain runoff. The zip-in groundsheet features a zip to the centre alloy pole, enabling it to be rolled away to create a safe area in which to use an optional tent stove and a place for muddy boots. The bell tent features the neat internal Apex Vent Control that can be easily opened from inside using just two cords neatly channelled along the walls. Optional carpet and footprint provide extra comfort under foot and protection.

The new Prospector Shanty (pictured left) and Castle build on the popularity of the Prospector style ridge tent that captures the spirit of early American pioneers. Pitching has been simplified while maintaining the sympathetic combination of modern technical materials and feature developments with its retro design. This ensures today's pioneer enjoys the best in comfort and reliability in a slightly smaller option for simpler pitching and storage. The two sizes of good-looking tents use HydroTex Polycotton created for Robens to enhance an Outback tent's microclimate by stabilising

temperature fluctuations and eliminating condensation. This is combined with a sturdy steel poles for stability.

Features include an elasticated stovepipe port for the installation of an optional Robens wood burning stove that can be safely positioned at the front of the tent thanks to the zip-close flap in the sewn-in groundsheet. Large mesh windows protected by roof eaves and internal curtains aid ventilation and the two-door front panel can be unzipped and rolled back to open the whole tent to the outdoors. Options include footprints and an inner for the Castle model to provide extra privacy and comfort levels.

The 5m three-panel polycotton Outback Windscreen (pictured left) complements the Outback range by providing privacy and side protection from wind. It stands 140cm high and features a split pole sleeve that allows the bottom of the screen to be rolled up to add a 27cm gap when required to aid ground-level air flow or account for ground conditions.

Remove the lower 30cm pole section to reduce the overall height of the windscreen if environment dictates, or to provide views when sitting.

Outback tipis, bell tents and tents benefit from a superb range of accessories created to enhance the experience by offering the necessary equipment for an off-the-grid kitchen and cooking over an open fire.

Robens and HydroTex are registered trademarks

Robens continues to test all its tents using its own in-house facilities and, during the tests, register the maximum (MAX) speed impact a tent was subjected to and the average (AVG) wind speed at which structural instability occurred. Structural instability may show as the collapse of tent, returning to shape when the wind drops, or a broken/deformed pole. At no point did Robens

encounter any form of catastrophic failure up to the maximum wind speed and an icon is now used, including on the Robens website, to show the MAX and AVG figures for each tent. The Wind Test figures are:

**Klondike S** MAX 210km/h and AVG 200km/h

**Yukon Shelter** MAX 200km/h and AVG 175km/h

**Prospector Shanty** MAX 195km/h and AVG 173km/h

**Prospector Castle** MAX 175km/h and AVG 169km/h

**Outback Windscreen** MAX 145km/h and AVG 145km/h
