

NEW ROBENS NAVIGATOR POLYESTER TENTS FOR WILDERNESS COMFORT

Scandinavian technical tent brand, Robens, has introduced a new range of tents based on its popular trend-setting retro styles. The Navigator range combines three tried and tested tipi and bell tent designs in the brand's own quality, tough HydroTex HD RS polyester Ripstop fabric to reduce packed size and weight for easy maintenance, transportation and storage. This allows a wider range of use, enhanced by an assortment of optional accessories that includes inner tents, floor coverings, footprints and tent stoves.

Simple and easy to pitch, the large living space and inherent stability will appeal to anyone looking for a

dependable and comfortable base tent with features and good looks that stand out from the crowd. And, to highlight the shared passion for outdoor life, a unique star print on the groundsheet maps constellations to be seen on clear nights.

The new tents include:

Green Cone PRS (pictured right) – The versatile polyester Green Cone PRS tipi has great headroom, a large porch and inner that sleeps four. It features an offset centre pole for easy access. This lifts the outer from the ground to create a gap to aid air flow. To save weight, remove the inner and adjust the telescopic centre pole so the outer sits close to the ground – the perfect bivvy tent. Small corner poles are sewn into the dark inner to create a wall that adds extra useable space.

Klondike PRS (pictured left) – the polyester version of the ever-popular Klondike provides excellent levels of comfort for up to six people. The vertical door makes for easy access – especially in bad weather. The groundsheet zip to the centre alloy pole allows it to be rolled away at the door to create a safe area for an optional stove or to sit muddy boots. The Internal Apex Vent Control is easily opened and closed from inside to work with low-level mesh vents to control ventilation.

Chinook Ursa PRS (pictured below right and header image) – this sleeps eight and is based on the technical-cotton Chinook Ursa that won the prestigious *Camping Magazine Editor's Choice Awards 2020* for best glamping tent. The PRS version combines retro good looks with modern quality materials and manufacturing techniques to offer huge living space that can be opened to the outdoors Bedouin-style for the ultimate sheltered views.

The tent offers performance levels that will be appreciated by outdoor adventurers like bushcraft aficionados. Its stunning design provides the ability to open the whole front as a massive sun porch by simply by undoing two zips that run up the wall either side of the door, releasing extension panels neatly folded inside the tent, and converting the A-frame into

support poles. This creates a huge open living space in which to shelter from sun and rain while enjoying the view.

Optional extras for the Klondike PRS and Chinook Ursa PRS include an inner tent, Universal Tipi Mosquito Inner for bug free living, fleece carpet for under foot comfort and a footprint. All Navigator tents benefit from a comprehensive range of Outback accessories created to enhance the 'bushcraft' experience and open untold comfort levels. These include items like tent stoves for tents with a flue port and the Thacla tipi light designed to maximise light efficiency.

Robens continues to test all its tents using its own in-house facilities and, during the tests, register the maximum (MAX) speed impact a tent was subjected to and the average (AVG) wind speed at which structural instability occurred. Structural instability may show as the collapse of tent, returning to shape when the wind drops, or a broken/deformed pole. At no point did Robens encounter any form of catastrophic failure up to the maximum wind speed and an icon is now used, including on the Robens website, to show the MAX and AVG figures for each tent. The Wind Test figures are:

Green Cone PRS MAX 135km/h and AVG 130km/h

Klondike PRS MAX 195km/h and AVG 190km/h

Chinook Ursa PRS MAX 200km/h and AVG 195km/h
